Introduction

1.1 Background

1. The National Scheme of Studies 2006 felt the need for study of modern languages by the secondary and higher secondary students to enable them to broaden their knowledge of languages and to understand customs, traditions and cultures of countries through study of their languages. The National Scheme of Studies, therefore, made a provision for study of modern languages besides study of English language which has been made compulsory from Grade I onwards. Amongst the modern languages, Arabic, Persian, Turkish, Chinese, French, German, Russian, Spanish, Japanese, Korean, etc have been considered as the most needed languages in Pakistani context. While the Curriculum for Arabic and Persian has already been prepared, the work on development of the Curriculum for Chinese language as an elective subject for secondary and higher secondary students of Humanities Group started, almost a year earlier, keeping in view the special nature of Pakistan's relationship with and the importance of Chinese language in the wake of rapidly growing economy of China and its increasing trade ties with Pakistan.

2. The Curriculum for Chinese language has been developed jointly by the Curriculum Development Experts working in the Curriculum Wing and almost all the faculty working in the Chinese Language Department of National University of Modern Languages and Sciences, Islamabad. In preparation of the Curriculum of Chinese language, following objectives were kept in view:-

1. Students to have a fundamental knowledge of Chinese language and its characters.
2. Students to obtain basic skills i.e. Listening, Speaking, Reading and Writing in Chinese language.
3. Students to develop interest in learning Chinese language and to do further research.
4. To focus on the communicative ability in Chinese specifically mastery in daily expression.

3. The Curriculum Development team had extensive discussions to bring the Curriculum for Chinese language according to the proficiency and cognitive level of the students of secondary schools as beginners and to make the study of Chinese language as a joyful and rewarding experience in the class and its practical application outside. The draft was also sent to the Provincial Governments for their input and feedback specifically on the

following:-

1. Contents and skills included in the draft curriculum.
2. Implementation of Chinese language in the Provinces that includes provision of teachers as well.

The Curriculum for Chinese language was thereafter finalized on the basis of the feedback received from the provinces.

4. Since the Chinese language is being introduced for the first time in school system, its teaching will have to be started on a limited scale preferably in Islamabad, in the first instance, where necessary expertise is easily available especially at the National University of Modern Languages and Sciences.

1.2 Reasons for Learning Foreign Language

1. The ability to communicate in a language enables students to grow academically and personally. It enriches learning and creates a new foundation for intellectual growth that is unique to language studies. Learning a second language is to enter a new culture. Students will develop an objective view of their native language as well as their own culture during the learning process of a second language. They will become aware that there are different structural elements of language and even different perspective to view the world. They will realize that language and culture are inexplicably interdependent on each other. With these understandings come a more sophisticated appreciation of the structures and patterns of the new language as well as a comparative understanding of the students' own language.

2. Through the acquisition of a foreign language, the students sharpen their intellectual skills, broaden their cultural horizons and increase their competitive edge. The world's economic and geo-political engagements are undergoing rapid and alarming changes since the start of the new millennium. Today, the globe is more interconnected than in the past due to improved revolutionized transportation and communications. Consequently the students will have to compete in a more globalized economy. A comfortable adaptability within a specific country asks for acquaintance of the social and cultural realities of that area, language is the only medium to reveal it all at various levels. Thus it enhances understanding and strengthens mutual economic, social and cultural ties.

3. As Pakistan's importance in the global economy grows, so does the importance of the Pakistani students becoming proficient in a second language other than their first one. Recognizing importance of the foreign languages in global market economy a provision of teaching modern languages as optional subject for class IX-XII has been added in National Scheme of Studies 2007. Purpose is to provide an opportunity to young students to learn another foreign language of their choice in addition to English. Four years of learning will prepare ground for mastery in that language during the later years of language learning.

1.3 Why to Learn Chinese Language?

1. On May 21, 1951, Pakistan and China officially established diplomatic

relations. Since then, the two nations have witnessed smooth development of friendly and neighborly relations as well as mutually beneficial cooperation in all fields. China is a major trading partner of Pakistan, accounting for nearly 11 percent of imports in 2004 from China. Trade between the two countries increased 40% during 2005 and is continuously on rise. Also China is supporting a variety of large-scale infrastructure projects in Pakistan, including highways, gold and copper mines, major electricity complex, power plants, and numerous nuclear power projects.

2. Chinese investment in Pakistan is also on rise. Of 500 foreign firms working in Pakistan, 60 are Chinese, which employ over 3,000 Chinese nationals. Most of the Chinese companies are working on energy and infrastructural projects, such as hydroelectric power projects, nuclear power production, exploration of natural gas and oil resources, extraction of coal, construction of rail and road networks, telecommunications, water dams and a deep sea port.

3. The people of the two countries have positive and cordial feelings towards each other, they have a desire to know more about the culture, customs, history and national facts of the other side. The reason behind is the language barrier. They need to pass over the language barrier. Majority of young Pakistani students generally communicate more easily with citizens from English speaking countries. On the other hand with China, language is such a huge barrier that even "higher-than-Everest-Sino-Pakistan friendship" cannot surmount it. Geographical location of China itself is very important for Pakistan. Pakistan and China, therefore, need to create a common ground between Pakistani and Chinese people that would bridge cultural differences. Direct cultural and intellectual contact needs to be strengthened between the younger generations in Pakistan and China.

4. China is one of the major strategic partners of Pakistan. Time has come for Pakistan to take initiatives to introduce and promote Chinese language instruction amongst the youths. The strategic interdependence of the two countries is encouraging each to bond with the other. Both nations are taking the steps to employ economic and public diplomacy between them to broaden their strategic state-to-state partnership into people-to-people bonds. With increasing trade and investment, China is helping a turnaround in the Pakistani economy. Parallel to economic relations, it is also expanding cultural linkages through education, civic society, and media to strengthen the mutual friendship and cooperation. The cultural and historical linkages are built up on the knowledge of a country's language that unveils its roots and growth. The Pakistani youth have an eagerness to know and learn Chinese language and thus to have a better understanding, sharing and participation in various respective fields. Pakistan needs to take effective measures to promote mutual understanding and strengthen the relationship between the two nations. This includes introducing modern Chinese language, sensitizing the Pakistani elite to modern China, its culture, history, and economy for better social relations and economic ties. This necessitates for teaching of Chinese language in Pakistani schools.

Aims and Objectives

This curriculum is designed for students in the IX and X grade of Secondary school, who have some background in English language.

This course is designed for two academic years (four terms, approximately 80 weeks). There are 6 periods in each week, 240 class periods in total during a year. Each class period is 35 minutes duration.

Aims/ Goals:

This Curriculum is aimed to:

- Help students to attain proficiency in listening, speaking, reading, and writing in Chinese language and develop a general understanding of Chinese culture
- Lay a solid foundation for their further study, inspire the students' interest in Chinese language and culture and make them confident in speaking Chinese
- Help students understand the different structural elements of language in Chinese and different ways to express ideas
- Inspire students' to learn Chinese language with interest, joy, wonder, and excitement
- Cultivate in them ability to discover, analyze and solve everyday life problems

General Objectives:

This curriculum is developed to enable the students to achieve the following objectives at the end of two years:-

1. Learn Pinyin, the sound patterns, or phonology, of Chinese language
 - Learn initials, finals, tones, neutral tone, the retroflex ending r, tone changes, word stress, sentence stress, intonation and assimilation and dissimilation
 - Relate the sounds that they produce and hear to convey meaning
2. Use Chinese characters, understand strokes, stroke orders, radicals, components and writing rules
 - Understand strokes, stroke orders, radicals, components and writing rules

3. Learn the semantics, or the meaning of words. Vocabulary and concept development
4. Able to read words, know their basic meaning and be able to make sentences with them
5. Learn how words are combined into larger units, such as sentences, to achieve intended level of understanding
6. Learn how to produce strings of words that conform to the syntactic rules of Chinese language, or grammatical sentences. Students will learn around basic 60 grammatical points.
7. Comprehend and produce formulaic expressions/language.

Specific Objectives

Four modes of expression/ language skills —listening, speaking, reading, and writing—constitute the paths by which information and concepts are transmitted from one person to another. Proficiency in each of these modes reinforces proficiency in the others. All four modes/skills of expression are important elements of any language instruction.

Students are expected to reach the following proficiency in each mode of expression:

1. Listening

- Be able to understand classroom expression in Chinese language and make corresponding responses
- Be able to understand the teacher while telling the main idea of the texts using the words and sentences they have learned
- Be able to understand language materials that are commonly used in the students' everyday lives but with very few new words when these materials are spoken at around 60 characters per minute.

2. Speaking

- Be able to use some formulaic expressions for basic routine greetings and social courtesies for oral interaction in predictable environment of class and school
- Be able to make simple conversations on familiar topics with the knowledge they have gained
- Be able to ask and answer simple questions about the texts

3. Reading

- Be able to preview the text and understand the main idea of the text
- Be able to read learned language materials that contain no more 2% of new words at 40 to 50 words per minute

- Be able to read new materials at the same level of difficulty as the texts by using dictionaries, obtain information they need and enjoy the reading process

4. Writing

- Be able to write simple Chinese characters in right stroke order
- Know how to use Chinese punctuation marks
- Be able to dictate language materials that consist of the words and sentences they have learned at 6 to 8 words per minute in three times
- Be able to answer simple questions about the texts in written forms

Such knowledge and abilities can be achieved through direct instruction and guided practice orchestrated by a teacher. In presenting such activities, the teacher considers five essential components: function, context, text type, accuracy, and content

Function: Function refers to linguistic tasks that students perform, such as asking for and responding to information, narrating past activities, describing events, expressing preferences, persuading, giving advice, listening to a news report, and communicating ideas in writing. In other words what a student can do with the language at a given stage.

Students develop the ability to perform the following functions:

- To greet and respond to greetings
- Talk about some objects in the immediate surrounding
- Going to the market/Buying and selling
- Telephonic contact, etc
- To introduce and respond to introductions
- To engage in conversations
- To express likes and dislikes
- To make requests
- To obtain information
- To understand some ideas and familiar details;
- To begin to provide information

Context: the settings in which students are expected to perform the functions. Examples of contexts are formal or informal settings. Context provides a delivery system, answering the questions: 'where?' 'when?' and 'with whom?'

Students can perform the afore-mentioned functions:

- When speaking, in face-to-face social interaction
- When listening, in social interaction and using audio or video texts;
- When reading, using authentic materials, e.g., menus, photos, posters, schedules, charts, signs and short narratives
- When writing postcards, greeting cards and short letters

Text type: the structure of written or spoken language. It is the kind of sentence structures students normally use at a given stage. While exceptions occur, typical students progress from single words and short phrases to sentences and paragraphs. Knowledge of text types constitutes another important element of acquiring a new language system.

In terms of text type, students will be able to:

- Use short sentences, learned words and phrases, and simple questions and commands when speaking and writing
- Understand some ideas and familiar details presented in clear, uncomplicated speech when listening
- Understand short texts enhanced by visual clues when reading

Accuracy: the degree to which student performance is structurally and sociolinguistic ally correct. Accuracy pertains to the precision of the message in terms of fluency, grammar, vocabulary, pronunciation, and sociolinguistic competence.

After one year of study, students should be able to:

- Communicate effectively with some hesitation and errors, which do not hinder comprehension
- Demonstrate culturally acceptable behavior for stage i functions;
- Understand most important information

Content: the subjects about which a student at a given stage is able to communicate. A variety of content topics may be used as the focus of instruction. Examples include familiar topics such as school and family, as well as more advanced topics such as current events, history, art, and literature.

Stage I would include some combination of the following topics both from Pakistani and Chinese context:-

- The self: family and friends, home, school health, daily schedules, leisure activities, likes and dislikes, shopping, clothes, prices, size and quantity, fruits and vegetables, and pets and animals
- Beyond self:directions, buildings and monuments regarding culturally relevant to both the countries, weather and seasons, counting symbols, cultural and historical figures of both the countries, colours, numbers, days, dates, months, time, travel and transportation, and profession

Note: (i) While describing content cultural ties of Pakistan and China should be highlighted
(ii)Rhymes can not be added at this level as it would be difficult at the beginner level instead Tongue Twister will be added.

3.1 Details of curriculum contents

1. Pinyin

Pinyin, or more formally Hanyu pinyin, is the most commonly used Romanization system for Chinese language. Hanyu is the Han (Chinese) language, and pinyin means "phonetics", or more literally, "spelling sound" or "spelled sound". Developed by the Chinese Phonetics System committee, a branch of the Committee for the Reform of the Chinese Written Language, the system was initially approved by the Chinese government on February 11, 1958. The International Organization for Standardization adopted pinyin as the international standard in 1982, and since then it has been adopted by many other organizations. Due to the complexity of Chinese characters, Pinyin is used to teach Chinese schoolchildren and foreign learners the standard pronunciation of Mandarin Chinese, to spell Chinese names in foreign publications and to enter Chinese characters (hanzi) on computers.

The pronunciation and spelling of Chinese words are generally given in terms of initials and finals, which represent the segmental phonemic portion of the language, rather than letter by letter. Initials are initial consonants, while finals are all possible combinations of medials (semivowels coming before the vowel), the nucleus vowel, and coda (final vowel or consonant). Initials and finals—and not consonants and vowels—are the fundamental elements in pinyin. Nearly each Chinese syllable can be spelled with exactly one initial followed by one final, except in the special syllable er and when a trailing -r is considered part of a syllable.

Even though most initials contain a consonant, finals are not simple vowels, especially in compound finals, i.e., when one "final" is placed in front of another one. The concepts of consonants and vowels are not incorporated in pinyin, despite the fact that the Roman alphabets are used in pinyin. In the entire pinyin system, there is not a list of consonants, nor a list of vowels.

Chinese language is tonal. Different tones distinguish different meanings. There are four tones in Chinese, i.e. the first tone (the flat tone), the second tone (the rising tone), the third tone (the rising and falling tone), and the fourth tone (the falling tone). In some cases, some characters lose their original tones and become neutral. The pinyin system uses diacritics to mark the four tones. The diacritic is placed over the letter that represents the syllable nucleus, unless that letter is missing.

a		ao		ai			an	ang
o					ou			ong
e				ei			en	eng
i	ia		ie				in	ing
		iao					ian	iang
					iou			iong
u	ua	uo		uai			uan	uang
				uei			uen	ueng
ü			üe				ün	
							üan	

1.4 Table of Tones

Name	The 1 st tone	The 2 nd tone	The 3 rd tone	The 4 th tone
Form	-	'	ˇ	ˋ
Example	mā 妈 (mom)	xíng 行 (OK)	hǎo 好 (good)	sì 四 (four)

Apart from the four tones, there is a neutral tone which has no tone mark and is pronounced short and weak. For example, de 的 (of).

Notes:

- A tone mark should be placed over the main vowel. When the vowel I is marked with a tone mark, the dot over it should be omitted
- When finals beginning with I or ü have no initials preceding them, the quasi-initial y should be added; or I or ü should be changed into y and the dots of ü should be omitted. For example, yīn 因 (because), yī 衣 (clothes), yūn 晕 (dizzy) and yú 鱼 (fish)
- When finals beginning with u have no initials preceding them, the quasi-initial w should be added or u should be changed into w. For example, wàn 万 (ten thousand) and wū 乌 (dark)
- When the initials j, q or x precede a final beginning with ü, the two dots of ü should be

omitted. For example, jù 句(sentence), qù 去(go) and xù 叙(narrate)

1.5 Tone changes

- When a third tone is followed by another third tone, the first third tone should be pronounced as a second tone. For example, nǐ hǎo 你好(hello) is pronounced as níhǎo
- When bù 不 (not) and yī 一(one) are followed by other characters, their tones change accordingly. When preceding characters with a first, second or third tone, 一 should be pronounced as fourth tone; when preceding characters with a fourth tone, 不 and 一 should be pronounced as second tone. For example, bùkuài 不快(upset) is pronounced as búkuài. Yībiān 一边 (at the same time) is pronounced as yìbiān. yīpáng 一旁(one side) pronounced as yìpáng, yīdiǎnr 一点儿(a few/a little) pronounced as yìdiǎnr, yīgòng 一共(altogether pronounced as yígòng

1.6 The retroflex ending r

As Beijing phonetics has been adopted as the standard pronunciation of Mandarin Chinese, there are many retroflex syllables. The spelling of a syllable with the retroflex ending requires adding r at the end of the original final. In terms of its function, the retroflex ending r may only indicate slight changes in pronunciation without changing meanings, for example, wánr 玩儿(play) and wán 玩 (play). In other cases, it may be used to differentiate meanings, such as tóu 头(head) and tóu儿 头儿(boss).

Sound distinction symbol.

1.7 The sound distinction symbol

When syllables beginning with a, o, e go after syllables, pronunciation confusion might occur. In such cases, the sound distinction symbol (') is used to distinguish the syllables, such as tiān'ān Mén 天安门(Tian'an Men).

2. Chinese characters

The writing system of Chinese language is Chinese characters. Chinese characters are the world's longest continuously used writing system. Chinese characters are different from alphabets. Characters convey meaning visually, while alphabets convey guidance to pronunciation, which in turn hints at meaning. Studies carried out in China have shown that full literacy in the Chinese language requires a knowledge of only between three and four thousand characters.

Chinese characters are morphosyllabic, each usually corresponding to a spoken syllable with a basic meaning. Note that Chinese characters should not be confused with Chinese words. Although Chinese words may be formed by characters with basic meanings, the majority of modern Chinese words are multi-morphemic and multi-syllabic compounds, that is, most Chinese words are written with two or more characters; each character representing one syllable. Knowing the meanings of the individual characters of a word will often allow the general meaning of the word to be inferred, but this is not invariably the case.

As studies show, Chinese characters may pose big hurdle to foreign students because of its complexity and distinction from alphabetic writing systems. Great importance should be attached to the instruction of Chinese characters because it's the foundation for reading and writing Chinese.

Section 3.2 Competencies, Standards, Benchmarks and Student Learning Outcomes

Competency: A key learning area.

Standards: These define the competency by specifying broadly, the knowledge, skills and attitudes that students will acquire, should know and be able to do in a particular key learning area.

Benchmarks: The benchmarks further elaborate the standards, indicating what the students will accomplish at the end of each of the five developmental levels in order to meet the standard. These provide at a glance, the continuum of the Chinese language learning.

Student Learning Outcomes: These are built on the descriptions of the benchmarks and describe what students will accomplish at the end of each grade. Most student learning outcomes progress and develop across grades where each skill is revisited, revised and reinforced. It is important to remember that learning outcomes within a competency or across competencies overlap and are interrelated; progress towards one outcome is often dependent upon progress towards another. Cumulative student learning outcomes for a particular academic year specify what the students will be able to do at the end of the academic year. The outcomes are realistic, observable, achievable and measurable. Some of the student learning outcomes might not be testable in the Board examinations due to constraints, but considering their importance these have been incorporated and are to be tested during formative assessment in the classroom.

2.1 Competencies in Chinese Language

The curriculum identifies five competencies and a total of eight standards for key learning areas of the Chinese language.

Competencies and their Standards:

Competency 1: Reading skills	Standards 1, 2
Competency 2: Writing Skills	Standard 1
Competency 3: Oral Skills	Standard 1
Competency 4: Lexical and Formal Aspects of Language	Standard 1, 2, 3
Competency 5: Cultural Awareness	Standard 1

The order in which the standards are listed does not indicate the relative importance of the standard. All are equally important.

Teaching of Chinese language

Instruction in Chinese as well as other language needs to be focused on the development of students' communicative competence. Teaching programmes, therefore, be carefully designed so that learning outcomes of students are maximized. In implementing the curriculum, teachers must consider the following aspects properly to facilitate the learning process.

1. **Teaching and Learning.** A teacher's role is to provide comprehensible input in the target language while using appropriate learning materials. The students' role is to listen, to comprehend, to memorize, to intake and to respond appropriately. The teacher should be aware that classroom instruction must be centered on guided practice, during which students actively participate in listening, speaking, reading, and writing activities. The teacher has to ensure that students comprehend the input. Language learning will be effective if teacher does less of the talking in class and puts the learners in a communicative situation.

Classroom instruction must be student-centered. The teacher must encourage students to participate actively in all learning activities. Activities should be devised and conducted in a way that students find it easy to work individually, in pair and in groups.

2. **Language competence and communicative competence.** Instruction of language knowledge, practice of language skills and development of communicative competence all go together. Instructions of language knowledge are more important at the beginning stage of language learning than the later stages. During this process, the language skills of listening, speaking, reading and writing are practiced and improved. Based on the obtained knowledge and development of language skills, students will be able to cultivate their communicative competence. It is important for teachers to provide students with ample opportunities to practice communication. Through such practice students can make significant progress in dealing with everyday situations in the target language. The teacher must provide students with genuine language materials and set up meaningful situations so that students can acquire language knowledge and skills in real contexts. The contextual materials that students could relate to their own situations are helpful in the learning.

3. **Listening, speaking, reading and writing.** All four modes of expression are important elements of foreign language instruction. Proficiency in each of these modes reinforces proficiency in the others. Listening and speaking are the most fundamental skills in real communication. It is important to develop students' listening and speaking skills throughout the learning process. A suggested list of equipments to develop a

language is annexed at A* Meanwhile, teachers should gradually strengthen the instruction of reading and writing. Reading is another important source of language input. Writing is complex process that will help students to have deeper understanding of the target language. Listening and speaking will benefit from the improvement of reading and writing abilities.

4. **Language and culture.** In addition to gaining experience with language systems, studying other languages provides students with knowledge of the richness of the cultures of the languages being learned. Connections between language and culture can be understood only by those persons who possess knowledge of both. Students learning a foreign language need to develop an awareness of other people, the people's unique ways of life, and their contributions to the world. By learning a foreign language, students gain knowledge of social, political, and economic institutions, great figures of history, literature, and the fine arts. They also gain knowledge of everyday life in the country where the target language is spoken. The cultural conventions of a country united by the same language are manifested in two distinct ways: (1) the society's production of art, music, and literature; and (2) the social conventions of that society's members. This if reinforced through a variety of teaching aids and by creating various situations in the class can enhance students understanding of that culture and is thus supportive to students learning. However, at the beginning stage language learning, students should be directed to focus on the acquisition of language system and the development of communicative competence. Instruction of cultural elements should be combined with the drills of language skills and the development of communicative competence.

5. **Interaction with Native Speakers** Finally, the community is an important resource for Chinese language students. Many Chinese are working, studying and living in Pakistan. Students in cities can interact with these native speakers and learn about their cultures firsthand without ever leaving Pakistan. These native Chinese can be invited to schools/classes on some occasions to provide first hand knowledge of language and culture to the students.

6. **Extended Learning Opportunities.** The teacher should structure extended learning opportunities beyond the classroom. Examples of extended learning opportunities are engaging in service learning activities, completing homework, using the Internet, interacting with businesses and the community(where possible) and participating in exchanges. By engaging in service learning activities, older students who are proficient in the target language can serve as mentors to younger students. Teachers assign homework that allows students to practice and reinforce skills acquired in the class. Homework can consist of reading (if sufficient preparation has been given); writing letters; summarizing reading material; writing a television weather report; listening to extra dialogues, books on tapes, anecdotes, advertisements, telephone calls, and instructions. Opportunities of learning and practicing newly introduced vocabulary, orally and in writing; through performing recorded guided practice tasks; performing grammar, syntax, and sentence structure drills; practicing communication with peers or native speakers, in person or over the phone; and listening to Chinese songs and memorizing lyrics in informal settings can prove more beneficial. The teachers have to think what can be done in this regard keeping in view their own as well as students limitations. Where possible the students may be encouraged to arrange exchanges of

messages in the target language through the Internet or simple written messages/letters in Chinese.

7. **Provision of Appropriate Resources**. The most important resource in the foreign language class is a competent teacher. Teachers competency is demonstrated more effectively when teachers possess content knowledge, a high level of proficiency in the language, information about the culture to be learned, and the skills necessary to deliver effective instruction. To hone these skills, teachers must have access to ongoing professional development.

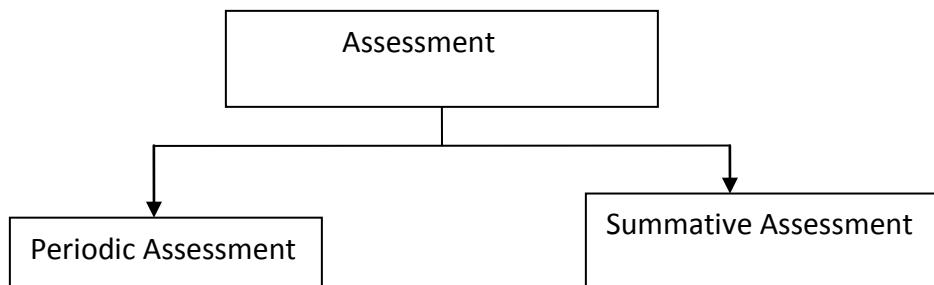

8. **Use of Technologies** Technology enhances language learning and aids students in strengthening linguistic skills, establishing relations with peers, and learning about contemporary culture and everyday life in China. Use of technology includes diagrams on an overhead projector, playing audio recordings, producing a video, teleconferencing, and holding a multilingual videoconference by satellite. Teachers may identify the available technologies, determine the applications they may have, and then decide how best to incorporate them into the instructional program. Supplementary material for the beginners available on internet in the target language (Chinese) may also be selected appropriately and used to strengthen the instruction.

Assessment and Examination

The focus of the curriculum is to prepare students for an assessment of their acquisition and use of language skills rather than memorization of the text book contents. Discouraging rote learning will enable students to approach different texts independently. Skill-based assessment using unseen texts and materials is, therefore, recommended for testing student's ability to use language in spoken and written communication.

Assessment forms

The two forms of assessment recommended are:

Periodic/Formative Assessment: It is an ongoing process throughout the academic session, and is generally done through homework, quizzes, class tests and group discussions. Periodic assessment tests encourage most students to do more revision work. It helps the teacher to assess student's performance and learning in relation to course objectives, and also to improve his/her own teaching accordingly. The teacher must provide feedback to the students on a regular basis.

Summative Assessment: It is the traditional end-of-term or final examination. It involves the whole course and determines promotion of the most suitable candidates to a higher class, course or university. Conducting only end-of-term assessments is of little benefit: it helps neither the students, who have not been trained to take examinations, nor the teachers who remains unaware about success/failure of their methodology and the course content. The same variety of assessment tools should be used for both types of assessments.

5.2 Purposes of Assessment

Primary purpose of all assessment, periodic (formative) or end -of -term (summative), is improving the teaching-learning and assessing by providing feedback to both teachers

and students.

- More specifically, assessment helps the teacher to:- Check the knowledge the students already have so that teachers know from where to start teaching
- Find out students strengths and weaknesses
- Explore the cause of students weaknesses and address them through improved teaching methodology and/or materials
- Find out if feedback to students is helpful and effective
- Compare the ability of students of one school with the ability of students of a similar grade in other schools

5.3 Methods of Assessment

Student's abilities and acquired skills can be tested through a range of assessment methods, and the process of selecting the most appropriate one must consider the purpose of a particular assessment, time and resources available, and age and developmental level of the students. A fully planned and balanced test can include any combination of objective and subjective methods and as well as through doing different activities in classroom.

This will be a part of teaching methodology & class room/formative assessment to provide feed back to the students.

Formative Assessment:

Characteristics of a good test:

A good test has the following characteristics:

Validity: It tests what it is supposed to test. The test items should be closely related to curriculum objectives to ensure validity.

Reliability: If the test is reliable, the students will get similar grades if they take the test on another occasion without any additional language training.

The validity & reliability of test needs to be ensured.

The assessment system should include:

- The purpose of assessment is to find out the learning achievement of students.
- A wide variety of assessment tools and techniques that measure students' ability to use language effectively for different purposes.
- Criteria to be used for determining performance levels for the SLOs for each grade level.
- Procedures for interpretation and use of assessment results to evaluate the learning outcomes. Whether to use percentile or percentages to interpret the assessment results.

5.5 End Term Exam Strategies for Oral & Written Exams Grade IX and X

It is recommended that Chinese Language test which should be taken during semester/year as mid-term exam and at the end of term there should be final /end term exam and both should consist following parts;

Parts	Weight age %
Listening	20
Grammar	40
Reading	20
Writing	20

Recommendations

First three levels of cognitive domain of Blooms taxonomy will be flowed and it is recommended that 60% marks should be allocated to knowledge and understanding: 40% marks should be allocated for application level.

End Term Exam for Grade IX	End-Term Exam for Grade X
Oral Skills (Listening & Speaking) This part should have three types of questions i.e. Write correct initial/final sounds, mark proper tones, simple statements and simple conversation between male and female. In this part teacher only play audio cassette and students after listening cassette answer the questions. It can assess through by giving fill in the blanks and MCQs.	Oral Skills (Listening & Speaking) This part should have two types of questions i.e simple conversation between male and female and dialogues between two persons or short stories. Simple conversation and dialogues/stories can assess by multiple choice, true false questions and MCQs.
Grammar Part This part should have multiple choices, correct sentences, match the items, rearrange the sentences and simple questions answers which are normally given in text books exercises.	Grammar Part It can assess by multiple choices/fill in the blanks, correct the sentences, change the statement into different types of question forms/change according to given model/example and rearranges the sentences which are given in text books exercises or similar to those exercise questions pattern.
Reading Part This part should have short passage and at the end there should be true false and multiple choices questions.	Reading Part This part should have passage and short passage with some words missing and at the end multiple choices, question answer, true false.
Writing Part This part should have change into Chinese Characters/Change the Chinese Characters into Pinyin, write characters with stroke orders, write Chinese Characters with help of given radicals. These types of questions are available in Chinese Characters Writing text books.	Writing Part This part should have short essay which is related to their daily life and texts.

Textbook Preparation

Text books and other learning materials provide an opportunity to students to interact a variety of texts to understand and use concepts. Importance of textbooks in language learning is particularly/specifically vital. A textbook assures a measure of structure, consistency, and logical progression in a class. It minimizes preparation time for teachers and provides novice teachers with guidance in course and activity design. It allows students to review material or preview other lessons and meets a student's needs or expectations of having something concrete to work from and take home for further study. It may also provide multiple resources: tapes, CDs, videos, self-study workbooks etc.

Generally, there are two categories of textbooks: Core textbooks and supplementary textbooks. The textbooks that integrate listening, speaking, reading and writing in each unit are called core textbooks. In these textbooks sequence is usually based on grammatical structures, vocabulary, and readability of narratives. Books that can be used alongside a core textbook are called supplementary texts. Supplementary textbooks could be in the following skill categories: listening, reading, grammar, speaking, writing, vocabulary, or pronunciation.

Many Chinese core textbook series are designed with similar components or sections. A typical Chinese language textbook may contain these major components.

- Introduction -- notes to the teacher and/or student
- Scope and sequence -- a table of contents listing the topics, vocabulary, skills, outcomes and Standards covered in each unit
- Units -- each unit may include a presentation of new language (vocabulary, content structures), practice activities, application activities, and an evaluation or end of unit performance assessment
- Tape scripts
- Answer keys
- Grammar appendices
- Index

A variety of prepared textbooks for teaching a foreign language are available for different languages. Same is the case with Chinese language and a variety of textbooks for teaching Chinese as foreign language are available in China. Since the students in Pakistan will hardly find any opportunity of exposure to Chinese culture during their classes hence the textbooks and other learning materials have to bridge this gap. *Three sample lessons have been **annexed at B***for the assistance of textbook developers.

For developing good textbooks for language teaching in this context needs to meet certain criteria. These criteria are as follows:

- Integrates four language skills: speaking, listening, reading, writing
- Receptive skills before productive (listen/read before speak/write)
- Integrates different learning styles: aural, oral, visual, kinesthetic
- Incorporates and varies different methodologies and techniques: Natural Approach, Communicative Competence, TPR, meaningful interchanges, conversations, drill, role play, information gap, problem solving, jazz chants, interview etc
- Grouping strategies: individual, pair, group and team work
- Sufficient student practice
- Grammar: taught in context; spiraling activities
- Interactive/communicative approaches
- Vocabulary: target vocabulary in lesson, recycled in lesson
- Reading: pre-read, read, post-read activities; theme recycled
- Writing activities integrated in text
- Assessments and self evaluations at end of unit; final tests
- Design and Format: illustrations, type size, color/black white, layout
- Pace appropriate to level
- Promotes cross-cultural awareness

Some additional criteria for a good textbook include:-

- Take into account the linguistic and cultural background of the student population
- Layout and formatting (including font size) is appropriate for the student population
- Affordable and can be used as a non-disposable resource if possible

Since this is the first effort to teach Chinese language in Pakistan to the students who have no background at all in Chinese language and culture before, therefore it is necessary to develop a set of text books for Pakistani students which meet the Standards given in this curriculum. These text books should:

- Be based on the investigation of student needs and effectively address the special needs of Pakistani middle school students
- Take into account Pakistani students' linguistic and cultural background
- Contain teacher-friendly instructions and reference materials
- Contain learner-centered materials and contents
- Use layout and formatting appropriate for middle school students
- Contain culturally sensitive visuals and graphics appropriate for middle school students
- Provide clear, authentic, and appropriate audio materials

Teacher Training

Chinese language is one of the most ancient language, is unique and to some extent difficult language in the world. Difficult in the sense that it is a non alphabetical language based on pictorial. It is a highly technical to teach Chinese language to those students who have alphabetical background. This position warrants highly professional and skilled teachers.

Teaching this unique language to Pakistani student will require teachers who are familiar with Chinese culture, have sound knowledge of the language and highly trained in pedagogy. These teachers have the task of changing the mind of the students from the alphabetical to the non alphabetical/pictographic language, therefore teachers for teaching Chinese language should be professionally trained, in teaching the language technically. If it does not happen so, the students will lose their interest in learning this language. Since in Pakistani teacher training colleges, Chinese Language is not offered at any level of professional training i.e. B.Ed, M.Ed, MA Education and others, therefore it will not be possible to find trained teachers to start teaching Chinese language during the next year or so. To find solution to this problem following may be considered:-

1. Arrangements for training of teachers at NUML may be made by the departments/governments/institutions desirous of introducing Chinese Language.
2. The graduates of NUML may be hired and further trained according to their needs.
3. Teachers from China may be recruited through bilateral agreement at the level of governments/departments/institutions.
